

# Flair Showers

# Raised Bases

One of the options available with our range of Shower Cubicles is the Raised Base. It is a simple yet functional system of raising the cubicle to allow for the waste outlet to run across the floor and off the slab and to the sewerage. Two common reasons for using the Raised Base is to get the fall needed for your waste water especially under a house and more importantly you don't have to cut into the concrete slab. All of our Shower Cubicles and Trays can be supplied with a Raised Base. We also supply the Flexi Waste or Micro Trap.

*1200mm x 90mm Standard Tray - Raised Base*

*Heidi*

A fibreglass kick panel is supplied for some models to allow for adjustments to be made in the height of the base.

On final fitting of the shower cubicle the feet should be liquid nailed to the floor so no movement can occur through vibration over the lifetime of the shower.
